

#### **Product Highlights**

#### **High Performance**

Gigabit access ports and built-in 10 Gigabit uplinks provide high bandwidth connections for clients, servers, and storage

#### Flexible Software

Multiple software images provide a flexible approach to software management, allowing only the required features to be installed

#### **High Availability**

Up to 9 physical switches can be stacked to create a single virtual switch, providing fault tolerance and increasing network reliability

#### **DGS-3630 Series**

### **Layer 3 Stackable Managed Switches**

#### **Features**

#### High Availability and Flexibility

- 20/44 10/100/1000BASE-T ports or 20 SFP ports
- 4 Combo 10/100/1000BASE-T/SFP ports
- 4 10 GbE SFP+ uplink ports
- Switch Resource Management (SRM) for flexible management of system resources
- 6 kV surge protection on all RJ-45 access ports
- IEEE 802.3af/at PoE (DGS-3630-28PC/52PC)

#### Reliability

- Redundant Power Supply (RPS) support
- IEEE 802.1D/802.1w/802.1s Spanning Tree
- Loopback Detection (LBD)
- Ethernet Ring Protection Switching (ERPS)

#### **High Bandwidth Stacking**

- Physical stack of up to 9 units, 432 GbE ports
- Supports long-distance stacking over fiber
- 80 Gbps per device physical stacking bandwidth

#### Operations, Administration, and Maintenance

- IEEE 802.3ah Ethernet Link OAM
- IEEE 802.1ag/ITU-T Y.1731 Service OAM

#### **Easy Management**

- RJ-45/mini-USB console port
- · Management and alarm ports
- USB port for firmware and configuration files
- Easy-to-use web GUI and industry-standard CLI

The DGS-3630 Series Layer 3 Stackable Managed Switches are designed for Small to Medium-sized Businesses (SMBs), Small to Medium-sized Enterprises (SMEs), large enterprises, and Internet Service Providers (ISPs). They deliver high performance, flexibility, fault tolerance, and advanced software features for maximum return on investment. With Gigabit Ethernet, SFP, 10 Gigabit SFP+, security features, and advanced Quality of Service (QoS), the DGS-3630 Series can act as core, distribution, or access layer switches. High port density, switch stacking, and easy management make the DGS-3630 Series suitable for a variety of applications.

#### Standard, Enhanced, and MPLS Images

The DGS-3630 Series is designed for use with three different software images: the Standard Image (SI), the Enhanced Image (EI), and the MPLS Image (MI)<sup>1</sup>. The Standard Image provides core SMB and SME functionality such as L2 switching, entry-level routing, L2 multicast, advanced QoS, Operations, Administration, and Maintenance (OAM), and robust security features. The Enhanced Image supports all the features of the Standard Image in addition to full L3 routing for enterprise integration, including OSPF, BGP, VRF-Lite and L3 multicast. The MPLS Image offers all the features of the Standard and Enhanced Images in addition to VPN services for ISPs, including IS-IS and MPLS L2/L3 VPN. With multiple software images, only the required features need to be installed, providing a flexible approach to software management.

#### **High Availability and Flexibility**

The DGS-3630 Series allows multiple switches to be combined to form a single physical<sup>2</sup> or virtual stack. This increases redundancy over multiple physical units, simplifies management, and provides a single IP address to manage all members in the stack. Up to 9 switches can be combined using DACs to make up to 432 Gigabit Ethernet ports available, allowing switching capacity to be increased with demand. The Switch Resource Management (SRM) feature allows the hardware table size to be dynamically changed, so that switch functions can be optimized based on the use of the switch. There are 3 modes: IP Mode, LAN Mode, and L2 VPN Mode. These modes modify the size of the Layer 2 and 3 tables for optimum efficiency.

#### Switch and Link Failover

In addition to traditional Spanning Tree Protocol (STP), Rapid Spanning Tree Protocol (RSTP), and Multiple Spanning Tree Protocol (MSTP), the DGS-3630 Series also supports advanced Ethernet failover redundancy technologies, such as ERPS and FlexLink. Ethernet Ring Protection Switching (ERPS) provides millisecond-level failover in a ring topology. Meanwhile, FlexLink offers link failover on designated switch ports, providing link redundancy without STP or LBD.

#### Security, Performance, and Availability

The DGS-3630 Series provides a complete set of security features including multi-layer Access Control Lists (ACLs) and 802.1X user authentication via TACACS+ and RADIUS. The DGS-3630 Series also offers extensive VLAN support, including GVRP and 802.1Q VLAN to enhance security and performance. A robust set of QoS features help ensure that critical network services such as Voice over IP and video conferences are given high priority through the network. The D-Link Safeguard Engine increases the switches' reliability, serviceability, and availability by preventing traffic flooding caused by malicious attacks.

#### **Versatile Management**

The DGS-3630 Series provides the D-Link Network Assistant (DNA) utility, an industry-standard CLI, and an intuitive web-based management interface that enables administrators to set up and remotely manage their networks. Support for SNMP allows centralized management of a large number of devices and out-of-band management is available via a dedicated console port. A mini-USB console port allows the DGS-3630 Series to be managed without any extra connectors, and a USB Type A port can be used to connect a storage device to store logs, configuration settings, and firmware images. The DHCP auto-configuration and auto-image features enable deployment of multiple switches automatically, saving costs for mass deployment. The DGS-3630 Series furthermore integrates essential features of OpenFlow 1.3, allowing the switches to be managed using an OpenFlow controller<sup>6,7</sup>.

#### Power over Ethernet (PoE) Support

The DGS-3630-28PC and DGS-3630-52PC models feature Power over Ethernet, which allows PoE-powered devices to be powered by the switch through a standard Ethernet cable. Both models support the IEEE 802.3af PoE and IEEE 802.3at PoE+ standards, providing up to 30 W of power per port. PoE effectively reduces deployment time for PoE devices such as IP cameras, VoIP phones, and access points, and eliminates the cost for additional electrical cabling. Both models feature a 370 W PoE power budget which can be increased to 740 W when outfitted with the DPS-700 redundant power supply, allowing the switches to power even more devices. Additionally, an extended Link Layer Discovery Protocol (LLDP) automatically negotiates and manages the power feed to IEEE 802.3at PoE+ powered devices for optimal power distribution.

#### **6 kV Surge Protection**

The DGS-3630 Series features built-in 6 kV surge protection on all PoE and non-PoE Ethernet access ports, and requires no external surge protection devices. This effectively protects the switches against sudden electrical surges caused by events such as lightning strikes or unstable electrical current. Built-in 6 kV surge protection significantly reduces the chance of equipment being damaged from electrical surges, and effectively lowers maintenance costs by minimizing the need for expensive equipment repairs or replacement.

#### **D-Link Green Technology**

The DGS-3630 Series features D-Link Green technology, which includes a power-saving mode, smart fan feature, reduced heat dissipation, and cable length detection. The power-saving feature automatically powers down ports that have no link or link partner, and ensures that LEDs are shut off when not needed. The smart fan³ feature enables the built-in fans to automatically activate above a certain temperature threshold, providing continuous, reliable, and eco-friendly operation of the switch.

Depending on the currently used image version, additional Enhanced and MPLS Image features can be accessed by purchasing the appropriate upgrade license.
Only DGS-3630 Series switches with the same image version can be physically stacked. For example, a DGS-3630 Series switch running the Standard Image can only be stacked with another DGS-3630 Series switch running the Standard Image.

Updated 2023/2/20

the Standard Image. For non-PoE models, by default, the fan speed is low. When the temperature inside the chassis exceeds 36 °C (97 °F), the fans switch to high speed until the temperature drops below 33 °C (91 °F). For PoE models, by default, the fan speed is low. When the temperature inside the chassis exceeds 37 °C (98 °F), the fans switch to high speed. When the temperature in the chassis reaches between 22 °C to 27 °C (71 °F to 80 °F), the fans switch to medium speed. When the temperature inside the chassis drops below 22 °C (71 °F), the fans switch to low speed. Based on maximum value of Switch Resource Management (SRM). Stacking cable and USB flash card not included.

Supported in firmware revision R2.10. D-Link MLAG Switch does not support L3 features and only supports L2 data traffic forwarding. For management, you can use the management interface (OOB interface) directly or stability a constraint VM hand we the part as a management interface.

establish a separate VLAN and use the port as a management interface.

OpenFlow Pure Mode is supported by R2.10, OpenFlow Hybrid Mode is supported by R2.20.

Supported by R2.25
